DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 09/17/10 has been entered.

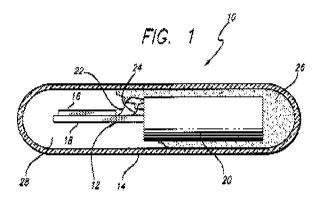

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1, 6-7, 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoakum (U.S. Patent 5,963,132) in view of Stafford et al. (U.S. Patent 5,482,008).

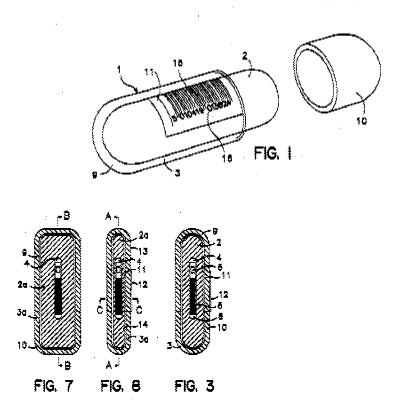

As to claim 1, Yoakum discloses an encapsulated implantable transponder (10), comprising: a circuit (12) (a circuit board 18 having components 16, 20, etc.) encased within a brick of epoxy (26) containing the circuit (12) housed in said circuit (18), a second epoxy (34) formed on the surface of the brick of the epoxy (26).

Application/Control Number: 10/825,648

Art Unit: 2835

Yoakum does not disclose a fully enclosed housing housed the transponder (10).

Stafford et al. shows an electronic system as shown in figures 1-15 comprising a fully enclosed housing (a bolus 1 having outer shells 9 and 10) fully cover core (2) containing an electronic transponder (4) contains a microchip circuit (5) and a coil (6)

housed in glass tube (8) and also housed in an epoxy (35); therefore, the transponder (4) is capable of being have a circuit board.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have a teaching of Stafford et al. employed in the apparatus of Yoakum in order to protect the apparatus from external impact.

As to claim 6, Yoakum as modified by Stafford discloses at least part of the circuit (12) is covered with an epoxy (26) including a light blocking pigment.

As to claim 7, Yoakum as modified by Stafford discloses the circuit comprises a substrate (18) and a plurality of components (16, 20, etc.) attached to said substrate, see figure 1.

As to claim 12, Yoakum as modified by Stafford discloses the housing (14) is substantially cylindrical in shape and has an inner diameter.

3. Claims 2-5, and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoakum and Stafford as applied to claim 1 above, and further in view of Colvin, Jr. (U.S. Patent 6,304,766).

Yoakum and Stafford disclose all of the limitations except for the housing is not made from glass or made from organic polymer or PMMA.

Colvin teaches an optical-based sensor comprising a housing (12) or in page 6 of a specification (a housing 102, US 6,304,766) to housing a circuit board.

Application/Control Number: 10/825,648 Page 5

Art Unit: 2835

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have a teaching of Colvin employed the housing of Yoakum and Stafford in order to provide a superior optical properties.

Response to Arguments

4. Applicant's arguments filed 09/17/10 have been fully considered but they are not persuasive.

Applicant argues:

the rejection on the basis that claims 1, 6-7 and 12 recite subject matter neither disclosed nor suggested by the combination of Yoakum and Stafford "a circuit encased within a brick of epoxy, wherein the brick of epoxy containing the circuit is housed in a housing, and a second epoxy disposed between the outer surface of the brick of epoxy and an inner surface of the housing. These features of claim 1 are neither disclosed nor suggested by the cited prior art references.

Examiner disagrees because as shown in Yoakum, the circuit board (18) encased within a brick of epoxy (26) and housed in a second epoxy (34) formed on the surface of the brick of the epoxy (26). Stafford teaches the fully encased housing (9 and 10) housed the circuit board structure (2) as explained in the Office action.

Therefore, the combination of Yoakum in view of Stafford meets all the limitations of claimed invention (claim 1).

Application/Control Number: 10/825,648 Page 6

Art Unit: 2835

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Colvin Jr. et al. discloses related art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuan T. Dinh whose telephone number is 571-272-1929. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lee Jinhee can be reached on 571-272-1977. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

/Tuan T Dinh/

Primary Examiner, Art Unit 2835.
